

MOTHERBOARD

Generic 9U VME/PCI Motherboard - 1/14/2000 - E. Hazen

Rev 1/14/2000 - add Universe II as VME-PCI bridge. See www.tundra.com for more details.

Three PCI busses are now connected by bridges. Buffer/multiplex removed between VTM and PMC.

Local control block is now a PCI slave, so VME only goes to the Universe II.
